

# WE ARE HIRING!

## Django Developer

We are looking for a Backend Developer to be a part of the OneFin engineering team and help us build functional systems and deliver customized software solutions for clients

### Responsibilities

- Design and implement backend infrastructure and APIs.
- Write high-quality, robust, readable, and scalable code.
- Demonstrate the ability to dive deep and thrive in ambiguous situations.
- Promote and support knowledge sharing within teams and external groups.
- Troubleshoot and debug applications.
- Adopt problem-solving as a core approach, always aiming for the root cause.
- Collaborate with the team to discuss and implement innovative ideas.
- Build responsive, robust, and optimized applications.

### Requirements and Qualifications:

- Bachelor's degree in Computer Science, Engineering, or related field.
- Minimum 2 years of experience as a Django Developer or similar role, preferably in bfsi, fintech organization.
- Proficiency in Python, with a solid understanding of Django, Celery, and Redis.
- Strong understanding of backend best practices and architecture.
- Experience in designing extensible DRY code.
- Ability to work effectively in a team environment and communicate technical ideas clearly.
- Experience with AWS or other cloud services.

### About Company

OneFin is a B2B technology credit platform. We offer modular, plug-and-play APIs to help our clients (like banks, NBFCs, fintechs, startups etc) underwrite and collect loans from end customers. In a highly credit underserved country with rapidly increasing smartphone adoption, we are enabling any company to become a fintech company through our software suite. We are a fast growing team of ~50 driven people with engineering, credit, banking and data science backgrounds. Our founding team consists of ex Goldman Sachs investment bankers with 30+ years experience. OneFin is backed by prominent Silicon Valley investors like Y Combinator, Khosla Ventures, Vy Capital, etc.
